

Peripheral troubleshooting theory

- 1) List 5 common issues users face with USB keyboards or mice on laptops, and write one possible solution for each.

<u>Issue</u>	<u>Possible Solution</u>
USB keyboard/mouse is not detected	Disconnect and reconnect the device, or try another USB port.
Device works intermittently	Check for loose connections and clean the USB port.
Keyboard keys or mouse buttons are not responding	Restart the laptop and update or reinstall the device drivers.
USB device is showing "Unknown Device"	Open Device Manager and update the USB drivers.
Mouse pointer is freezing or moving incorrectly	Replace the batteries (wireless mouse) or clean the sensor area.

- 2) Simulate a troubleshooting flow: Your Bluetooth headphones are not connecting to your phone. Write the exact step-by-step actions you would take to diagnose and fix the issue, mentioning any settings or indicators you would check.

Step 1: Check Bluetooth settings

- Open phone **Settings** → **Bluetooth**.
- Make sure Bluetooth is turned **ON**.
- Check if the headphones appear in the available devices list.

Step 2: Check headphone status

- Confirm the headphones are powered ON.
- Check the indicator light to see if they are in **pairing mode** (usually flashing light).

Step 3: Restart devices

- Turn Bluetooth OFF and ON again on the phone.
- Restart both the phone and headphones.

Step 4: Remove and pair again

- Go to Bluetooth settings.
- Select the headphones and choose **Forget/Unpair device**.
- Put headphones into pairing mode and connect again.

Step 5: Check battery level

- Ensure headphones have enough battery charge.

Step 6: Check interference

- Move away from other Bluetooth devices that may interfere with the connection.

Step 7: Test with another device

- Try connecting headphones to another phone to check whether the problem is with the headphones or the phone.

- 3) A user reports that their external webcam is not detected during a Zoom call on Windows 10. Write a checklist of 6 things to check or try to resolve the problem.

Hint: Consider device manager, privacy settings, and app permissions.

❖ Check physical connection

- Ensure the webcam USB cable is properly connected.
- Try another USB port.

❖ Check Device Manager

- Open Device Manager → Cameras/Imaging Devices.
- Check if the webcam is listed and update the driver if needed.

❖ Check Windows privacy settings

- Go to Settings → Privacy → Camera.
- Turn ON camera access for the device.

❖ Check Zoom camera settings

- Open Zoom → Settings → Video.
- Select the correct webcam from the camera list.

❖ Close other applications

- Make sure another app (Teams, Skype, browser, etc.) is not using the webcam.

❖ **Restart and update**

- Restart the PC and install the latest webcam drivers or Windows updates.
- 4) You are helping a friend whose printer is showing 'offline' status on their PC. Describe how you would use the Windows Troubleshooter tool to try to fix the issue, and explain what information the tool provides during the process.

❖ **Steps to use Printer Troubleshooter:**

- Open **Settings → Update & Security → Troubleshoot**.
- Select **Additional Troubleshooters**.
- Choose **Printer** and click **Run the troubleshooter**.
- Select the printer that is showing offline.
- Follow the instructions provided by Windows to detect and fix problems.

❖ **Information provided by the Troubleshooter:**

- Checks printer connection status.
- Detects driver problems.
- Checks if the printer is set as the default printer.
- Identifies print spooler service issues.
- Provides recommended fixes or actions.
- Shows whether the problem was fixed or requires manual steps.

❖ **Possible fixes suggested by the tool:**

- Restarting the printer.
- Clearing stuck print jobs.
- Updating or reinstalling printer drivers.
- Reconnecting the printer to Wi-Fi or USB.
